

AIVOA – QA Bug Report | Final
Total Bugs: 5 | High: 1 | Medium: 3 | Low: 1

Bug ID	Title	Module/Page	Category	Severity	Priority	Environment	Preconditions	Steps to Reproduce	Expected Result	Actual Result	Reproducibility	Status	Evidence	Recommendation
BUG-001	Inconsistent CTA text for the same functionality	Homepage – CTA Buttons	UI/UX / Content Consistency	Low	Medium	Desktop – Google Chrome	User is on the AIVOA homepage	1. Observe the top navigation CTA. 2. Observe the primary hero CTA. 3. Compare the button text.	CTAs serving the same purpose should use consistent wording, or their different wording should clearly indicate different actions.	The top navigation button says "Book a Demo", while the hero button says "Book a Free Demo", although both perform the same action.	Consistent / As observed	Open	Homepage screenshot	Standardize the CTA wording across the page unless the business intentionally wants to distinguish the actions.
BUG-002	Footer Twitter/X and YouTube links lead to non-existent pages	Homepage – Footer / Social Media Links	Functional / Navigation	Medium	Medium	Desktop – Google Chrome	User is on the AIVOA homepage	1. Open the AIVOA homepage. 2. Scroll to the footer. 3. Click the Twitter/X icon. 4. Return and click the YouTube icon.	Each social-media icon should redirect the user to the corresponding valid AIVOA social-media page.	The links redirect to a "Page doesn't exist" page instead of a valid social-media profile.	Consistent / As observed	Open	Video record	Verify and update the social-media URLs. If the accounts do not exist, remove the corresponding icons.
BUG-003	Demo booking form submission fails due to 504 Gateway Timeout	Book a Free Demo / Lead Submission	Functional / Backend API / Form Submission	High	High	Desktop – Google Chrome	Demo booking form is opened and required fields are completed	1. Open "Book your free 30-minute demo". 2. Enter complete information. 3. Select an Industry Type. 4. Click "Book My Free 30-Min Demo →". 5. Observe the error. 6. Open Chrome DevTools → Console and inspect the request.	The lead submission request should be processed successfully and the user should receive a confirmation message.	The UI displays "Error — Submission failed — please retry." DevTools shows POST /api/leads returning 504 (Gateway Timeout).	Repeatedly observed	Open	Screenshot showing user-facing error and POST /api/leads 504 (Gateway Timeout)	Investigate the /api/leads backend/API processing and upstream timeout. Review server logs, request handling, database/external-service dependencies, and timeout configuration.
BUG-004	Header CTA button is hidden/overlapped at smaller viewport	Homepage – Header / Responsive Layout	UI/UX / Responsive Design	Medium	Medium	Chrome DevTools Responsive Mode – phone or tablet view	AIVOA homepage is open and viewport is reduced	1. Open the AIVOA homepage. 2. Open Chrome DevTools. 3. Enable Responsive/Device Mode. 4. Resize to approximately 714 × 667 or smaller. 5. Observe the header.	The header should responsively adapt. Important controls, the CTA should remain visible and accessible.	At the smaller viewport, the header layout does not adapt correctly and the Book a Demo button becomes hidden/overlapped, affecting access to the CTA.	As observed	Open	Responsive viewport screenshot	Review responsive breakpoints and header layout rules. Ensure the CTA remains visible or is moved into an accessible mobile navigation/menu.
BUG-005	Name and WhatsApp/Phone fields accept excessively long input without validation	Book a Free Demo – Form	Functional / Input Validation	Medium	Medium	Desktop – Google Chrome	Demo booking form is open	1. Open the demo booking form. 2. Paste approximately 300 characters into Your Name. 3. Paste an excessively long value into WhatsApp / Phone. 4. Attempt to submit. 5. Observe field behavior and result.	The form should enforce appropriate input constraints. Name should have a reasonable maximum length and Phone should accept an appropriate format/length, with clear validation.	The Name and WhatsApp/Phone fields allow excessively long input without apparent client-side length/format validation. Submission then results in an error.	As observed	Open	Screenshot & Video record showing long input accepted in form fields	Add field-level validation with appropriate maximum lengths and format restrictions. Display a clear validation message before allowing submission.
